

AI-Assisted Software Development

Module 8: Using AI Tools for other workflows

Mike Burton 4-6 November 2025

Using AI Tools for workflows other than Coding

Having looked at AI tools for Coding, the following sections will explore the use of AI tools in other areas of the software development process.

- Product Planning
- Design and Architecture
- Other Development Tasks
- Refinement and Quality
- Best Practices and Tips for AI-Assisted Development

8a. Other Workflows - Product Planning

AI Tools can help with these areas of the Product Planning:

- Product Requirements Document
- Technical Planning
- Requirements Gathering
- Development of Specification
- Keeping Planning Documentation organised

8b. Other Workflows - Design and Architecture

Use AI Tools to define and refine:

- Database Design
- System Architecture
- UI/UX Design
- Design Systems
- Technical Specifications

8c. Other Workflows - Tasks around Development

Apart from the production of the product's source code, the development stage of a product lifecycle also requires these activities, which AI Tools can assist with:

- Project setup
- Code generation
- Testing strategies
- Debugging approaches
- Documentation

8d. Other Workflows - Refinement and Quality

AI Tools can help with refining the various Quality aspects of a product:

- Practical testing approaches
- Real-world optimization
- Code quality improvements
- UX refinement
- Production readiness

8e. Best Practices and Tips for AI-Assisted Development

In summary:

- Effective prompting
- Context management
- Workflow optimization
- Common pitfalls
- Real-world tips
